This Hoshizaki IM-240ANE-HC-23 is a modular cube ice maker producing up to 190 kg of high-quality cube ice per 24 hours

Meeting even the strictest hygiene requirements, this true allrounder offers many application possibilities in segments including the foodservice and medical sector

Size

Unit	Height	Width	Depth
Mm	880	560	700
Cm	88	56	70
Inches (approx)	34	22	27

- This natural refrigerant is not only climate-friendly but also boosts the machine, when it comes to performance and production capacity.
- Closed water circuit provides maximum protection against any type of contamination during the entire cubing process
- A dedicated jet of fresh water is injected into each of the closed cells
- Excess water leaves the closed cell through a set of outlets
- The cell walls block the freezing water's expansion from all sides while reaching down to -30°C during the cubing process
- Automatic rinse cycles, impurities such as minerals, are eliminated from the water resulting in the purest ice possible while your machine is protected from calcification and mineral build-up
- Last and comes with smart design extras such as a magnetic water pump without direct coupling
- he variable setups with modular bins and bases allow the user to mix and match depending on individual requirements and conditions
- The smart plug-and-play design guarantees an easy and quick set-up
- Easy to use, clean, and maintain
- Material : Stainless Steel
